New secreted and transmembrane PRO polypeptides and nucleic acids, useful in gene therapy, in chromosome and gene mapping, as chromosome markers, in tissue typing, and in chromosome identification -

Claim 2; Fig 117; 706pp; English.

CC transmembrane (PRO) polypeptides. Also disclosed is an antibody that consenbrane (PRO) polypeptides, a method for stimulating the crelease of tumour necrosis factor alpha (TNF-alpha) from human blood by contacting the blood a PRO polypeptide, a method for stimulating the cells with a PRO polypeptide, a method for stimulating the cells with a PRO polypeptide, a method for detecting the presence of a cumour in a mammal and an oligonucleotide sequences are useful as probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in clintomosome and gene mapping, in generating antisense RNA and DNA, in clintomosome and gene mapping, in generating antisense RNA and DNA, in clintomosome and gene mapping, in generating antisense RNA and DNA, in consorme identification, as chromosome markers protes, for chromosome identification, as chromosome markers, as therapeutic agents for stimulating the release of TNF-alpha from human blood, for coids may also be used diagnostically for tissue typing. The sequences of presented in AcAO5700-ACAO60004 are the cDNAs encoding the PRO propertides and invention of chondrocytes and inventions. invention of the invention. discloses human nucleic acids encoding secreted g secreted and an antibody that

Novel secreted and transmembrane polypeptides and polynucleotides encoding them useful for treating cancer, kidney diseases, bone, cartilage disorders and immune deficiencies .

Claim 2; Fig 92; 459pp; English.

The present invention relates to the isolation of novel human PRO CC polypeptides, and the polynucleotide sequences encoding them. The CC PRO polypeptides are useful for detecting other PRO polypeptides, for CC linking bloactive molecules to cells expressing PRO polypeptides, for CC linking bloactive molecules to cells expressing PRO polypeptides, CC for modulating biological activities of cells expressing PRO polypeptides, CC polypeptides, and for for identifying agonists or antagonists. The CC bloactive molecule maybe a toxin, radiolabel or antiopody, and causes CC polypeptides or death of the cell. The PRO polypeptides are useful for CC treating immune disorders, diabetes or hyper or hyper-insulinaemia, CC cardiac insufficiency, nervous system disorders, kidney disorders, CC bone and cartilage disorders or arthritis, tumours, and wound healing. CC The polynuclectide sequences encoding PRO polypeptides are useful as CC hybridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for CC generating transgenic animals or knockout animals, for the genetic CC analysis of individuals with genetic disorders, and in gene therapy. CC The present sequence data for this patent was obtained in electronic CC format directly from the USPTO web site at CC sequence data for this patent was obtained in electronic CC sequence and the USPTO web site at
